Read ME @tend

This website is hosted here :
https://tend-prameya.c9users.io/index.html

For user login : -john@gmail.com/john
For admin: - admin/admin
for Caregiver- rose@gmail.com/rose.

You can use above hosted version for all the testing.

The website services 3 types of users, Caregivers, Requesters and Admin. Caregivers and Requesters are the primary actors.
The idea is to approve caregivers only after a third party validates their background check and references.
The Caregiver is responsible for maintaining their availability. The websites search is the key value proposition for the users as it connects Caregivers and Requesters.
The websites registration phase goes through the users profile, defining his role in the system. Service request is subject to caregivers approval.

The current system holds some requesters and caregivers. Demo Requesters credentials are Email:john@gmail.com password:john. Caregiver credential is Email:rose@gmail.com password:rose.

When John searches, he can see a list of caregivers. If he selects one, that caregiver is omitted from the search result for John. However, the caregiver will still be visible for other users. The two will commit to an engagement only after the caregivers approval.

Requesters have an option of adding multiple cards in the system and choosing any one of them for payment. Caregivers on the other hand, can add banking details for payment reception.
Payment method is variable to incorporate temporal payment transactions.

   Show the list of users and the messages

How to run application
 Requirements:
1. Need to have WAMP or XAMP or MAMP to run Php and MySQL
2. Create an empty databased named 'tend'
3. Import tend.sql into MySQL tend database
4. Create tend_services inside 'www' folder of WAMP
5.Create a folder structure like below

> This PC > Windows8_OS (C:) > wamp > www > tend_services > upload

Name	Date modified	Type	Size
profile	3/9/2016 12:39 PM	File folder	

This PC > Windows8_OS (C:) > wamp > www > tend_services

Name	Date modified	Type	S
upload	3/9/2016 12:24 PM	File folder	
admin_home	3/12/2016 8:14 PM	PHP File	
careGiverDetails	3/11/2016 4:49 PM	PHP File	
caregiveruploder	3/11/2016 4:44 PM	PHP File	
cargiver_landing	3/11/2016 4:49 PM	PHP File	
config	3/12/2016 8:13 PM	PHP File	
fileuploader	3/11/2016 4:44 PM	PHP File	
forgotPW	3/11/2016 4:49 PM	PHP File	
login_auth	3/11/2016 4:47 PM	PHP File	
search	3/11/2016 5:01 PM	PHP File	
signup	3/11/2016 4:49 PM	PHP File	
userCareGiverEngagements	3/11/2016 4:49 PM	PHP File	
userDetails	3/11/2016 4:49 PM	PHP File	
useredit	3/11/2016 4:49 PM	PHP File	

6. Copy all php files from server to tend_services

7. Copy the html files to any folder (keep the same hierarchy)
8. Open index.html file and run it
9. User the login as described above
10. During registration process of new users, if the user is a caregiver, the profile picture, resume and references get uploaded to tend_services\upload folders
11. For a regular user, profile picture gets uploaded to tend_services\upload\profile
